### Long-Term Statistics

- **Total Results Received:** 42921
- **Positive Cases Since 7/29/20:** 285
- **Overall Positivity Rate:** 0.66%
- **Individual Contacts by R.R. Team:** 1303

*An Active Case is defined as a person who is COVID-19 positive and is within their 10-day isolation period.*

- **Quarantine** refers to the practice of separating individuals who have had close contact (see definition of close contact below) with someone with COVID-19 to determine if they develop symptoms or test positive for the disease. Quarantine lasts for a total of 10 days after the exposure has ended.

- **Isolation** is a term used for an individual who tests positive for COVID-19. Isolation keeps someone who is sick or tested positive for COVID-19 without symptoms away from others even in their own home.

- **Close Contact** is defined as any individual who was within 6 feet of an infected person, masked or unmasked, for at least 10 minutes starting from 2 days before the illness onset (or, for asymptomatic patients, 2 days prior to positive specimen collection) until the time the patient is isolated.
